after tooth loss

after bone loss

tooth loss causes bone loss

When a tooth is lost, the jawbone beneath it shrinks from lack of stimulation. Not only does losing teeth affect your smile, it also changes the shape of your face causing you to look prematurely aged.

advancements in implant dentistry

Our practice proudly uses BioHorizons dental implants that have been developed using science and innovation to maximize function and esthetics. These implants are lightweight, durable, biocompatible and made from titanium, the most widely used material in implant dentistry. BioHorizons also offers implants treated with proprietary Laser-Lok® surface technology developed to help your smile remain beautiful over time.

BioHorizons dental implants come with a lifetime manufacturer's warranty and are clinically-proven by some of the most thorough and in-depth research in the industry.

Ask us about restoring and maintaining your natural smile with individual dental implants or implant-supported dentures from BioHorizons.

dental implants for tooth replacement

prevent

normal profile

why replace missing teeth?

Losing one or more of your teeth creates a gap in your smile, affects your ability to chew properly, and can alter your diet and nutrition. In addition to these serious issues, tooth loss also causes bone loss.

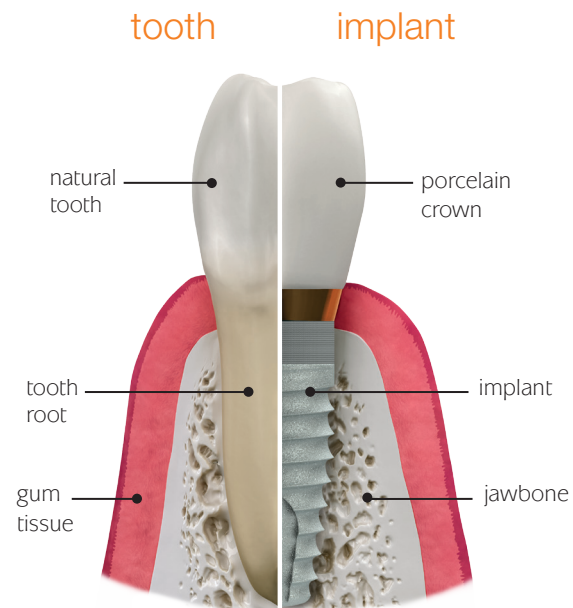

dental implants

tooth replacement

A missing tooth can be replaced by a dental implant without altering the healthy adjacent teeth. Once the implant is placed, a post (or abutment) is attached providing support for your final crown.

what are dental implants?

Dental implants are the new standard of care for tooth replacement. They bond with healthy bone and provide permanent support for dental crowns and dentures. Dental implants look and feel like natural teeth and can last a lifetime.

why choose dental implants?

Dental implants, like natural teeth, stimulate the jaw and prevent bone loss. Plus, with dental implants, healthy teeth are not compromised. In fact, leading dental organizations recognize dental implants as the standard of care for tooth replacement.

untreated missing teeth

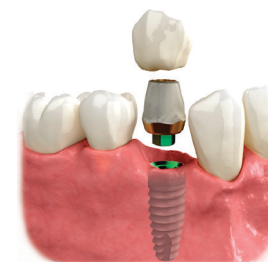

- unattractive smile
- loss of chewing ability
- accelerated bone loss

traditional crown & bridge

- grinds down healthy teeth
- bone loss continues
- greater risk for cavities and tooth failure

dental implants with a crown

- full chewing ability
- preserve healthy teeth
- prevent bone loss

smile big,
eat what you want,
be a confident you
